# Phantom 4

The DJI Phantom 4 is an extremely smart flying camera able to intelligently track subjects without a separate device, avoid obstacles and fly with a tap of your finger. All while shooting 4K video or 12 megapixel stills.

TapFly and ActiveTrack are two brand new commands in the DJI GO app, unique to the Phantom 4. Now with a simple tap you can fly anywhere visible on your screen or track a moving subject smoothly and easily.

# Remote Controller

This powerful remote controller allows you to operate your Phantom 4 up to 3.1 mi (5 km)\*, while giving you buttons and dials for exposure, camera tilt, photo capture and video recording.

Built into the remote controller is DJI Lightbridge, which when paired with a compatible mobile device gives you a live HD view from the Phantom's camera. An internal battery ensures a long battery life and ease of use.

The default flight control is known as Mode 2. The left stick controls the aircraft's altitude and heading, while the right stick controls its forward, backward, left and right movements. The gimbal dial controls the camera's tilt.

\* The remote controller is able to reach its maximum transmission distance in a wide open area with no magnetic interference, and at an altitude of about 400 feet (120 meters).

Black propeller rings go on motors with black dots.

Press the propeller down onto the mounting plate and rotate in the lock direction until secure.

Silver propeller rings go on motors without black dots.

Check that the propellers are secure before each flight.

## 7. Flight

### Safe to Fly (GPS)

Before taking off, make sure the Aircraft Status Bar in the DJI GO app indicates 'Safe to Fly (GPS)' or 'Safe to fly (non-GPS)' if flying indoors.

In the DJI GO App:

#### Auto Takeoff

The aircraft will take off and hover at an altitude of 4 feet (1.2 meters).

#### Auto Landing

The aircraft will land vertically and stop its motors.

#### Return-to-Home (RTH)

Bring the aircraft back to the Home Point. Tap again to stop the procedure.

#### TapFly

Tap on your screen to fly your Phantom in that direction, avoiding obstacles as it flies.

#### ActiveTrack

Mark an object on your screen to track it as it moves.

#### Normal

You are in control of the Phantom, with satellite and Return-to-Home support.

#### Smart

Tap to use Point of Interest (POI), Waypoints and more.

- Watch the tutorial in the DJI GO app or on the official DJI website to learn more.
- Always set an appropriate RTH altitude before takeoff. When the aircraft is returning to the Home Point, you should guide it with the control sticks. Refer to the Disclaimer and Safety Guidelines for more details.

### Manual Takeoff

Combination Stick Command to start/stop the motors

Left stick up (slowly) to take off

### Manual Landing

Left stick down (slowly) until you touch the ground  
Hold a few seconds to stop the motors

- Rotating propellers can be dangerous. Do not start the motors when there are people nearby.
- Always keep your hands on the remote controller so long as the motor is still spinning.
- **Stop motor mid-flight:** Pull the left stick to the bottom inside corner while simultaneously pressing the RTH button. Only stop motors mid-flight in emergency situations when doing so can reduce the risk of damage or injury. Refer to the user manual for details.

It's important to understand basic flight guidelines, for the safety of both you and those around you. Don't forget to read the Disclaimer and Safety Guidelines.
